NETWORK™

PRIVATEST® TEST RESULTS

A PERFORMANCE REVIEW OF THREE IMPORTANT AREAS OF YOUR METABOLISM

JANE DOE
TEST ID: 879026
03/25/2010

The statements on these pages have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure, or prevent any disease.

Your PrivaTest® Report

Introduction

You now have in your hands a piece of valuable information about your individual biochemistry, one more piece of the interesting puzzle that is YOU. This unfolding biochemical story, made available to you through this and future PrivaTests, will ultimately build a personalized picture of how certain key areas of your metabolism respond to the demands and rewards of your particular lifestyle.

The sum total of your genetic heritage, the stressors in your environment (both good AND bad), the foods you eat, the exercise you get, and the nutritional supplements you take all have an impact on your biochemical function. Through The Trump Network™, you now have a personal resource that allows you to monitor the cumulative effects of many of these factors. You have a direct pipeline to leading-edge scientific information that you can immediately begin using in your life. In addition, you also have privileged access to premier nutritional products, which provide unexcelled personalized support for your health.

Your test results have been evaluated, and your Custom Essentials® formula has been calibrated based on the results. Details can be found in the following pages.

Remember, you are a dynamic system. Your biochemistry makes subtle and not-so-subtle adjustments on a regular basis, yet they are all within the framework of your system. One person's response to a given set of variables may be entirely different from another's. The PrivaTest is one of the best ways to get the information you need about your dynamic system.

Your first PrivaTest is a benchmark for your particular biochemical responses in three key areas. Over time, and under the influence of your Custom Essentials formula, your metabolism will change. Retaking the PrivaTest will identify your metabolic trends in the areas measured, giving you a reasonable picture of what your biochemistry will do under given circumstances. Based on this information, Custom Essentials will continue to provide you with the nutritional support you need to offset certain biochemical weaknesses and optimize biochemical strengths. This fine-tuning of individual biochemical trends is the hallmark of The Trump Network Custom Essentials program.

Through your commitment to The Trump Network concept, you will never have to wonder if you are taking the best supplements for your individual needs. You will know that you are.

Metabolic Function

Metabolic function is a term that refers to the complete set of chemical reactions that occur in your cells. These chemical processes are the basis of life, allowing your cells to reproduce, maintain their chemical structures, and respond to environmental conditions.

These chemical reactions are organized into metabolic pathways in which chemicals are transformed into others through the action of enzymes that regulate them. Enzymes allow the regulation of metabolic pathways in response to environmental changes or signals from other cells.

The important thing to remember is that everyone's metabolism is different. Your chemical pathways are as individual to you as your fingerprints, your face, your voice. The purpose of testing is to identify those differences in a way that allows us to adjust supplementation to address them.

Three very important areas of your metabolic function have been evaluated in our laboratory. These specific areas were selected for testing because research has demonstrated their value for assessing the metabolic status of essential biochemical pathways.¹⁻¹⁶

Sulfate

1

A measurement of the availability of sulfate and other sulfur-containing compounds which are essential to your liver's ability to break down toxic substances.

In addition to the normal metabolic by-products that your liver must clear every day (such as hormones, fat-soluble vitamins, and food chemicals), your modern body is exposed to man-made chemicals that previous generations of humans never had to process. Some researchers estimate that between 30,000 and 100,000 chemicals a year are synthesized and distributed for use around the world. The effects of human exposure to multiple chemicals are not fully known. But it is a fact that your liver is the hard-working organ that must deal with each of the chemicals that you come into contact with every day of your life. Sulfur-containing compounds are used by the liver to turn harmful toxic substances into more neutral compounds and/or water-soluble compounds that can be eliminated in the urine or bile. Sulfur-containing compounds such as glutathione also have valuable antioxidant properties. A higher level of sulfate reserves is desirable for proper liver and antioxidant function.

2

ADMA

A measurement of a scientifically-advanced marker for nitric oxide (NO) production. Nitric oxide is a naturally-occurring compound involved in a host of metabolic processes such as immune, nervous, and vascular system functions.

Exciting research on nitric oxide prompted the American Association for the Advancement of Science to name nitric oxide the "Molecule of the Year" in 1992, based on its vital role in regulatory functions. Studies have demonstrated that either too much or too little nitric oxide can have its own specific set of effects. Excess is associated with inflammatory processes in the body while inadequate nitric oxide is associated with susceptibility to infection and vascular issues. In the last two decades, research has exploded on nitric oxide, and the laboratory methods for measuring its production have been refined. This exciting new measurement, ADMA, is the most recent advance in determining nitric oxide regulation in the body. ADMA levels must be carefully balanced in your body because ADMA is a compound that easily modulates your body's production of nitric oxide. If ADMA levels are too high, significant effects can occur. In humans, high ADMA has caused increased vascular resistance, decreased blood flow in the brain, increased sodium retention, and decreased heart output, among many other effects. In fact, high ADMA has been associated with everything from poor control of blood pressure, to pregnancy and fertility issues, to accelerated aging, to erectile dysfunction — just to name a few health challenges related to altered NO production. Gene researchers have identified 979 genes that change expression when exposed to high levels of ADMA. If your ADMA level is outside the balanced range, you need extra support with targeted nutrients that impact the nitric oxide production pathways, and these will be added to your Custom Essentials. In addition, even if your oxidative stress level is within the desirable range as measured by the DOG level in your PrivaTest, a high ADMA level requires additional antioxidant nutrients to help modulate the effects of excessive ADMA.

8-hydroxy-2-deoxyguanosine

(DOG)

3

A measurement of a DNA-repair product in response to oxidative stress. Oxidative stress is the term used to describe an imbalance between the production of reactive oxygen damage and the body's ability to "quench" these

oxidative fires and/or repair the DNA damage. Oxidative stress results when the body's antioxidant free-radical-quenching system is overwhelmed and free-radical compounds go uncontrolled. Free radicals are "molecular thieves" that have an excited, unpaired electron in their outer shell, making them unstable. They will steal an electron from another molecule in order to stabilize themselves. However, in the process, the "victim molecule" becomes a free radical, which then steals an electron from another molecule, which then steals an electron from another molecule, and so on and so on.

The mechanism of electron transfer is absolutely vital to our basic life processes, and the body has a system in place (the antioxidant system) to make sure that it proceeds in a controlled manner. This antioxidant system, made up primarily of specific vitamins, minerals, and enzymes, quenches these little metabolic fires at just the right time so that free radicals do not get out of hand and cause cellular damage. Unfortunately, in our industrialized world, this system sometimes becomes overwhelmed by all the other sources of oxidative stress, including environmental pollution, petrochemical exposure, and even increased exercise levels. (Part of the training effect seen over time in regular moderate exercisers is an increase in activity in the antioxidant system enzymes as a protection against the increased generation of free radicals. Weekend warriors, beware. Erratic exercise patterns increase oxidative stress by generating more free radicals but do not result in a complementary increase in antioxidant activity.)

In the laboratory, we measure the level of 8-hydroxy-2-deoxyguanosine – DOG for short. DOG is only produced when your body is called upon to repair oxidative damage to your cellular DNA – the structure that contains all the genetic instructions that make you, who you are. When DNA is damaged, the body mobilizes specialized "excision enzymes." Like microscopic tailors, these targeted enzymes "snip out" the oxidized DNA sections and repair the DNA strand. The oxidized sections that are released and eliminated in your urine are DOG. Measuring DOG, in effect, takes a deep look into your genetic machinery, actually assessing the degree of free-radical oxidative "hits" that your DNA is experiencing and repairing. DOG is a compound that is produced when DNA has been repaired. Measuring the level of DOG reflects how much oxidative stress is "hitting" your cellular DNA, creating the need for repair. If your DOG level is high, it indicates you need extra antioxidant support, and these specialized nutrients will be added to your Custom Essentials formula.

Your ADMA Results

The recommended range is in between the values of 2.26 and 4.81 mmol/mol creatinine. Your ADMA Score is: **4.04**

Nitric oxide is a naturally-occurring compound that has been discovered by researchers to be a critical regulatory molecule in the functions of the immune, nervous, gastrointestinal, and vascular systems. The well-regulated production of nitric oxide by your body is vital for the healthy function of these systems, particularly for blood vessel function and inflammatory processes. In a delicate balancing act, nitric oxide must be produced in just the right amount, neither too much (which can aggravate inflammation in the body), nor too little (which may lead to cardiovascular dysfunction). An essential player in this balancing act is asymmetric dimethylarginine (ADMA), which helps to keep nitric oxide well-regulated. However, at abnormally high levels, ADMA blocks the production of nitric oxide too much, greatly increasing the chances of poor function in your vascular system and elsewhere. On the flip side, while still under scientific investigation, very low ADMA levels may allow uncontrolled production of nitric oxide, leading to chronic inflammatory states. The good news is that your ADMA test result is currently within the balanced production range. To assist you in maintaining your level in this range, your Custom Essentials foundation formulation in this category has been blended with specialized ingredients in amounts needed to maintain your balanced nitric oxide production, including a synergistic complement of B-complex activating cofactors.

Your DOG Results

The recommended value, if you are currently on nutritional supplements, is less than or equal to 4.1 ng/mg creatinine and if you are not, less than or equal to 5.3 ng/mg creatinine. Your DOG Score is: **1.1**

When your DNA is under assault from oxidation, your body springs into action to repair any DNA damage that might result. In this repair process, a compound is generated named 8-hydroxy-2-deoxyguanosine, which we call DOG for short. Because it is generated when DNA is being repaired, DOG is a specific indicator of the degree of oxidative stress your DNA is experiencing. According to your test results, it appears that your body is handling excessive free radical production at the DNA level fairly well at this time. You may have a natural tendency for efficient internal antioxidant production and/or you may not be subject to major oxidative stress at this time. You also indicated on the questionnaire that you are currently taking antioxidants. This supplementation has most likely been a factor in your more desirable test results. As continued prevention, and to insure that you maintain your current lower DOG level, your Custom Essentials formula has been blended with basic amounts of the major antioxidant compounds in synergistic combination, including vitamin C, selenium, natural beta-carotene and vitamin E, and grape skin/seed extract (a potent source of oligomeric proanthocyanidin complexes).

Your Sulfate Results

To be in the more desirable range, your sulfate score should have a value of greater than 180 ug/mg creatinine, your Sulfate Score: **245**

Jane, your results show that you currently have a urinary sulfate level in the more desirable range. To insure that you maintain a satisfactory level of detoxification ability as normal aging progresses and as life stressors and toxic exposures change, your custom nutrients foundation formulation has been blended with additional nutrients known for the maintenance of effective liver function. These additions include basic amounts of the herb silymarin which has been shown in clinical studies to actually protect against the effects of major liver poisons and stimulate protein synthesis for the regeneration of liver cells. Your custom nutrients blend also includes basic amounts of the primary nutrients that make up the structure of glutathione, a powerful liver antioxidant.

Lab Accuracy

The Trump Network™ laboratory has been a fully licensed clinical laboratory since 1984. Clinical labs perform testing for the medical professions. They are required by state and federal laws to undergo rigorous annual inspections by regulating agencies to insure quality and accuracy of the test results they report. There are established procedures for insuring quality control and assurance that each lab must follow to retain licensure.

Clinical chemistry is the science of analyzing body chemistry as it relates to health and disease. In this discipline, there are standard validation methods for quantifying accuracy and sensitivity of a particular test in regards to the procedure and equipment used to obtain a result. Reproducibility is gauged by how closely a lab can duplicate a result from a single sample repeated many times or several samples over a set period of time. In general, an acceptable error is a variation of 10% or less. This is called a coefficient of variation or CV.

Measurement of certain life-sustaining substances such as glucose or electrolytes in blood must have a very low CV as these measures are critical to patient care. Cholesterol typically has a CV of 5% or less. That means if you measure the same sample of blood for its cholesterol level 100 times, you should get numbers that will vary around the “true” value by 5% or less. So, for example, a blood cholesterol test result that says 200 may actually be 190-210. This range of variance is typical for clinical labs and is an acceptable criterion for licensing requirements. Each run is monitored with quality control samples and calibrators to insure accuracy and reproducibility. This data is reviewed by licensing inspectors annually to verify acceptable performance for continuation of the lab’s license.

The statements on these pages have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure, or prevent any disease.

Your Custom Essentials® Formula

Your Custom Essentials® supplement contains a precise blend of ingredients which are selected using specific information from your questionnaire and an evaluation of the three laboratory test results to reflect your unique nutrient needs in the three major areas of concern. If you have returned your Personal Health Assessment, these questions will serve as a basis for comparison as your nutritional status changes and will assist The Trump Network™ in determining your future nutritional needs.

1 A foundation formula is selected for you on the basis of your age, sex, and specific information from your questionnaire. And then:

2 Using the results of each of the three tests outlined in the “Metabolic Function” section on page 3 of this report, additional nutrients are added to your foundation formula. Each of the three individual test results dictate specific nutrients to be added to your foundation formula, for an addition of up to 20 extra nutrients in varying dosage amounts.

3 These additions expand your foundation formula to include the special nutrients that you need to support your vital metabolic pathways in the three areas tested. This customization produces a carefully blended Custom Essentials formula. Currently, 48 possible permutations of ingredient combinations have been established by test results so far. No other supplement line available today offers this individualized nutrient tailoring, backed by leading-edge scientific research.

4 The 48 formulas are based on over 20 years of research and address the metabolic variations in test results seen in almost all of the population tested in our laboratory.

5 All of the designated nutrients in your specific Custom Essentials formula are then cold-processed using state-of-the-art blending techniques to preserve the high quality and maximum potency of each ingredient.

6 The Trump Network products meet or exceed the highest standards of quality in the industry, including the United States Pharmacopeia (USP) standards for dissolution and dissolvability of capsules and contents. USP is a 175-year-old independent, not-for-profit corporation composed of delegates from all major medical and pharmaceutical colleges, associations, the FDA, and other similar agencies. USP establishes standards for pharmaceuticals and, more recently, for supplements. Our products are manufactured in accordance with cGMPs (current good manufacturing practices) for nutritional supplements in accordance with USP standards. Our formulary’s manufacturing process is ISO 9001 certified, and their in-house laboratories are ISO 17025 accredited.

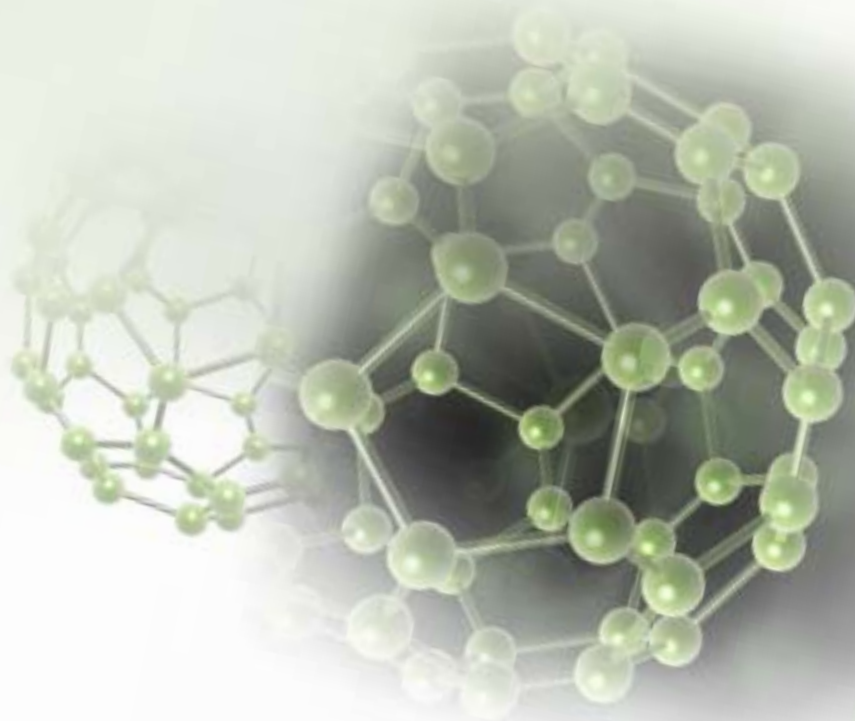

7 In addition, our supplement capsules are certified kosher.

Science Marches On

Our commitment to leading-edge research has already created significant enhancements to our product. Recent research has provided new information that has allowed us to refine our reference ranges and to further customize our formulations.

Your Custom Essentials® formula will continue to be the finest foundation of essential nutrients on which to build your total health program.

In addition, The Trump Network™ recognizes the value of other nutrients not known to be essential but which have a documented, beneficial effect on metabolic function. As a Trump Network customer, you have access to the information you need to make informed choices for adding these products to your basic program. By being part of The Trump Network family, you have been given an educational resource that no other supplement company provides—in effect, a personal research team that will guide you in making the best selections, based on the most recent information, in the ever-changing world of nutrition.

A Benefits Comparison of Custom Essentials® to Four Leading Multivitamins.

The following chart illustrates how Custom Essentials ingredients compare to leading multivitamin brands on a benefit-by-benefit basis. This comparison makes it easy to see why ordinary vitamin supplements are not even in

the same league with Custom Essentials in terms of your body's ability to absorb and use each ingredient. Unlike the others, Custom Essentials contains none of the unnecessary or negative ingredients listed at the bottom of the page.

Benefit	Custom Essentials® (Typical Formula)	One-A-Day® Maximum	Centrum® Silver	LifePak®	Nutriline®
All natural beta carotene (Synthetic safety questionable)	Yes	No	No	Yes	Yes
Mixed carotenoids (Vital natural vitamin A co-factors)	Yes	No	No	Yes	No
All natural vitamin D (Like your skin makes)	Yes	No	No	Yes	Yes
All natural vitamin E (Synthetic is less active)	Yes	No	No	Yes	Yes
Mixed tocopherols (Vital natural vitamin E co-factors)	Yes	No	No	No	Yes
No flush niacin	Yes	No	No	No	No
Activated vitamin B6 (Doesn't require conversion in body)	Yes	No	No	No	No
Activated vitamin B12 (Doesn't require conversion in body)	Yes	No	No	No	No

Lactose	No	No	Yes	No	No

Five Critical Facts You Need to Know About Health & Nutrition.

1 Good diet, good health. A good diet is your best guarantee to receive the nutrition that you need, and a good supplement can help support your nutritional needs.

2 Food alone cannot supply the nutrients you need. Foods grown on depleted, chemically fertilized soils lack the key nutrients you need. In addition, eating over-processed foods results in nutritional deficiencies. Researchers report an alarming decline over the last 50 years in produce nutrient levels,* (peppers: vitamin C down 30%, broccoli: calcium & carotenes down 50%, cauliflower: vitamin B1, B2, & C down 50%). Furthermore, nutrients are stripped from your body due to stress, drugs, food additives, junk foods, coffee, alcohol, candy, and increasingly from chemical toxins in our environment.

3 You need to supplement for optimal health. Research shows most Americans are deficient in nutrients essential for their health (including magnesium, vitamin E, A, C, B6, zinc, folate, and others). The FDA's minimum requirements were created to prevent deficiency diseases, not to support optimal health. However, the real data shows higher amounts of these vitamins and minerals are important for sustained health. Even JAMA (the Journal of American Medical Association) reversed a 30-year position on vitamin supplements and now says: "It appears prudent for all adults to take vitamin supplements."

4 Your nutritional needs are different. Your body's metabolism is uniquely your own. That's why your nutritional needs are different as well. You wouldn't buy clothing without trying it on for size. So why buy one-size-fits-all supplements that are designed for the average person? Since you are not the average person, how can you be sure what you really need for your unique metabolism?

5 Only customized supplements can provide the nutrients you and you alone need for optimal health. Now, a metabolic test used by physicians for over 20 years can identify your nutritional needs, and a scientifically-based customized supplement program based on your unique metabolism can help support your health, youthful appearance, and vitality. You no longer have to guess which nutrients you need from a bewildering variety of "in-vogue" or one-size-fits-all" supplements. The customized supplements we offer are formulated with the highest quality pharmaceutical-grade nutrients and sent to you each month.

You deserve the facts. What you do with them can have a profound effect on your health.

* US department of Agricultural Published Data, between 1963 and 2005

Summary

Here are some recommendations that will help you get the most out of your Custom Essentials® and The Trump Network™ experience:

Make taking your supplements as much a part of your daily routine as eating. Regular compliance is a key factor in obtaining the most from your program. Your Custom Essentials program should be part of a total wellness lifestyle which includes a good diet, regular exercise, plenty of rest, and the avoidance of environmental toxins.

Select your diet carefully from fresh, whole foods. Choose those that are pesticide- and additive-free, as possible, to reduce the demands on your antioxidant and detoxification systems. While supplementation is necessary to achieve the optimal amounts of certain nutrients and your Custom Essentials will definitely supply nutritional support for specific vital metabolic pathways, supplements cannot make up completely for poor dietary choices over the long term. (Remember, the word is supplement, NOT substitute.) A good daily diet and your Custom Essentials are a perfect complement to each other and together form a powerful partnership. In this case, indeed, the whole is greater than the sum of its parts.

Nine months is the commonly recommended time frame for retesting. If you wish to continue with the unsurpassed individualized nutritional support found in your original Custom Essentials formula, please be assured that you may do so with complete confidence. Many people find, upon retesting, that their current formula continues to be the perfect formula for them.

However, if you have made any major changes in your lifestyle or dietary habits and you would like to evaluate the impact from those changes, we want you to know that the retest is available to you and you may retest any time after three months on Custom Essentials.

The choice to retest is yours. Whatever you choose to do, rest assured that your Custom Essentials formula original or retested — will continue to provide you with the very best supplemental nutrition available in the marketplace today.

So there you have it: the next landmark needed to guide you on the path to building your total dynamic health program. With Custom Essentials as the solid foundation of that program, you can be sure that your essential requirements are not only being met, but are being met to your individual biochemical specifications in three vital areas of metabolic function.

New research and innovative technologies from our affiliate laboratory will allow us in the future to offer additional tests to evaluate other areas of metabolic function. As promised, The Trump Network continues to provide you, our valued customer, with the finest in science-based, customized nutritional supplementation for your good health.
